

# PROGRAMME FOR OILSEED RAPE

“*Brassica napus*”

				
Seedling	Stem elongation	Beginning of flowering	Flowering	Pre-harvest
NHCa Delta or NHK Delta + XStress	NHCa Delta or NHK Delta + XStress	CalFlux + Rainbow Wave		Rainbow Wave
5 + 1 L/Ha	5 + 1 L/Ha (x 2 applications)	1 + 2 L/Ha		3 L/Ha
Better root establishment for faster growth and winter tolerance. Better tolerance to cold and water stress	Enhanced growth with better stem strength and improved plant health. Greater green leaf area.	Increased number of flowers and improved pod set. More and larger seeds on average per pod, leading to increased oil levels (1 or 2 applications)		Better pod filling through initiation of senescence of leaf area and nutrient transfer to seeds.
Improved plant establishment and resilience	Stronger plant growth, improved plant structure.	Enhanced flowering		Improved seed quality
