

PROGRAMME

FOR CORN / MAIZE CROPS

	
Establishment	Vegetative
Flowering	Yield - Ripening
NHDelta	NHDelta
XStress	XStress
	CalFlux RainbowWave
TipTop	TipTop

Establishment	NHDeltaCa or NHDeltaK @ 3L/Ha + XStress @ 1L/Ha or TipTop @ 5 L/Ha. Improved rooting, removal of micro - nutrient deficiencies. Better plant establishment.
Vegetative	NHDeltaCa or NHDeltaK @ 5L/Ha + XStress @ 1L/Ha or TipTop @ 5 L/Ha. Stronger stems and greener larger leaves. Improved stress tolerance.
Flowering	NHDeltaCa or NHDeltaK @ 5L/Ha + XStress @ 1L/Ha or TipTop @ 5 L/Ha. Better flowering. Increased stress tolerance. More cob development. CalFlux @ 1L/Ha + Rainbow Wave @ 1-2L/Ha. Better pollination. Higher weight, fewer physiological disorders and increased disease resistance. Redirect sugars and other photosynthetic substances to the cob.
Yield - Ripening	NHDeltaCa or NHDeltaK @ 5L/Ha + XStress @ 1L/Ha or TipTop @ 5 L/Ha. Better filling of cobs and seeds. Higher cob quality, more grains at tip.

Use **TipTop @ 5.0 l/ha** as an alternative to **NHDelta + XStress** if plant stress is not an issue. For more information contact your local distributor.
