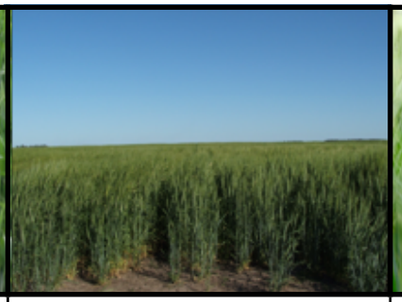
PROGRAMME
FOR WHEAT & BARLEY CROPS

For winter and spring crops

Leaf emergence (2-3 leaf)	**Tillering**	**Start of stem extension GS30**	**Flag leaf emergence**	**Ear wash**	**Flowering**
NHCa Delta or NHK Delta	NHCa Delta or NHK Delta	NHCa Delta or NHK Delta	NHCa Delta or NHK Delta	NHCa Delta or NHK Delta	
1-4-All	1-4-All	1-4-All	1-4-All or XStress	1-4-All or XStress	
					CalFlux
Enhanced rooting	Increased number of tillers	Reduced apical growth, shorter internode length, better stem strength.	Larger, greener flag leaf. Greater grain fill	Increased green leaf, greener awns, greater grain filling	Increased number of grains, fewer blind grains.

NH Delta - 5L/Ha. A full spray programme must be used to optimise plant growth, better roots, more tillers, stronger stems and greater grain size. Ear wash spray optional to enhance yield further if good growing conditions.

1-4-All - 2 L/Ha. Micro-element source for removing any blocks to maximum growth.

XStress - 2 L/Ha. Can be used instead of 1-4-All to improve late season stress to ensure maximum grain fill

CalFlux- 2 L/Ha. For improvement in flowering (particularly barley) leading to more viable grains.
