

Wheat & Barley

PROGRAMME OF APPLICATIONS

				GROWTH STAGES					
				LEAF EMERGENCE (2-3 LEAF)	TILLERING	START OF STEM EXTENSION GS30	FLAG LEAF EMERGENCE	EAR WASH	FLOWERING
	Application method	Rate of use	Number / timing of applications						
	FOLIAR spray	5 l/ha	4 - 5						
	FOLIAR spray	2 l/ha	4						
	FOLIAR spray	1 - 2 l/ha	4						
	FOLIAR spray	1.5 l/ha	1						
	FOLIAR spray	2 - 5 l/ha	as required						
				Enhanced rooting	Increased number of tillers	Reduced apical growth, shorter internode length, better stem strength	Larger, greener flag leaf. Greater grain fill	Increased green leaf, greener awns, greater grain filling	Increased number of grain, fewer blind grains

NHDeltaCa or **NHDeltaK**. A full 4 spray programme must be used to optimise plant growth, improved rooting, more tillers, stronger stems and greater grain size. Optional 'ear wash' spray to further enhance yield if growing conditions are good or for milling wheat varieties.

Micro-element source for removing any blocks to maximum growth. Use in tank mixture with NH Delta to enhance yield benefits.

To be used to reduce the effect of any type of plant stress during the crop cycle. Tank mix with NH Delta to improve plant health and yield. Replaces 1-4-All when applied in spray programme.

For improvement in flowering (particularly barley) leading to more grains and better grain fill.

A full compliment of macro and micro nutrients, for enhanced growth, increasing both yield and quality. Use as necessary depending on crop requirements. Can be used late in the crop to keep flag leaf greener for longer to allow for better grain filling and yield.
