

**Protect
your crop
against all
types of
stress**

XStress TECHNOLOGY ADVANTAGES

- ✔ Strengthens the integrity of the cells.
- ✔ Improves post-harvest quality in all kinds of fruit.
- ✔ Promotes the strengthening of the cell walls.
- ✔ Improves the natural defences of the plant.
- ✔ Neutralises toxins generated in the cells during moments of stress.
- ✔ Powerful anti-stress product that provides resistance to all forms of environmental stress including excessive heat or cold, excessive light, drought or flood, high salinity.

How does XStress work

XStress increases the production of antioxidants opposing the production of ethylene, improving the response of the plant to situations of environmental stress.

Dose rate

XStress can be applied foliarly or in irrigation / fertigation.

Dose rate for foliar application: 1-2 litres / ha in a volume of at least 200 litres of water.

Dose rate for irrigation applications: 2-3 litres / ha every 15-20 days or dividing this dose into 2-3 applications with shorter intervals.

Pack sizes: 1 and 5 litres.

Formula: COMPOUND INORGANIC MICRONUTRIENT FERTILISER. Contains: 0.5% copper (Cu), 2% iron (Fe), 1% manganese (Mn), 2% zinc (Zn), w/w

XStress uses the most advanced knowledge in nutritional technology to moderate the response of plants to environmental stress, resulting in a healthier and stronger plant with significantly higher yields than might be expected under these conditions.

Improves growth. XStress is a nutritional product developed to reduce the negative effects that result from environmental stressful situations. XStress contains a mixture of micronutrients, with a new system of formulation which gives an advantage to penetrate into the leaf stomata easily and without any effort. This technology is a powerful tool for combating abiotic stress which together with specially combined nutrients to improve the crop growth in extreme conditions such as high or low temperature, floods or droughts (water stress), high light conditions and high concentrations of salts.

Best Post-Harvest. XStress strengthens the cell walls and enhances the natural processes that neutralise the oxidative toxins that stress situations produce in the tissues of the plant. Its use significantly improves the self life of the fruit after harvesting, increasing its value throughout the post-harvest period.
